

Artisan

300 Level Project · Documentation

Find trusted artisans near you.

A marketplace where plumbers, electricians, tailors and mechanics register with their trade, area and photos of past work. Admins verify them, and customers filter by category and location and request a quote.

Next.js · TypeScript · Drizzle ORM · PostgreSQL · Railway — 1 October 2026

1. Overview

The problem. Finding a reliable plumber, electrician, tailor or mechanic usually depends on word of mouth. Customers can't see past work, don't know if the person is trustworthy, and have to negotiate prices blindly.

The solution. **Artisan** is a web app (inspired by the look and feel of the Uber app) where:

Artisans register

with their trade, the area they work in, a short bio, a starting price and photos of past work.

Admins verify

every new artisan before they appear in search, so customers only see checked profiles.

Customers search

by category (trade) and location (area), compare ratings, prices and photos.

Customers request quotes

— the artisan replies with a price, the customer accepts and the job is tracked to completion.

2. Users and roles

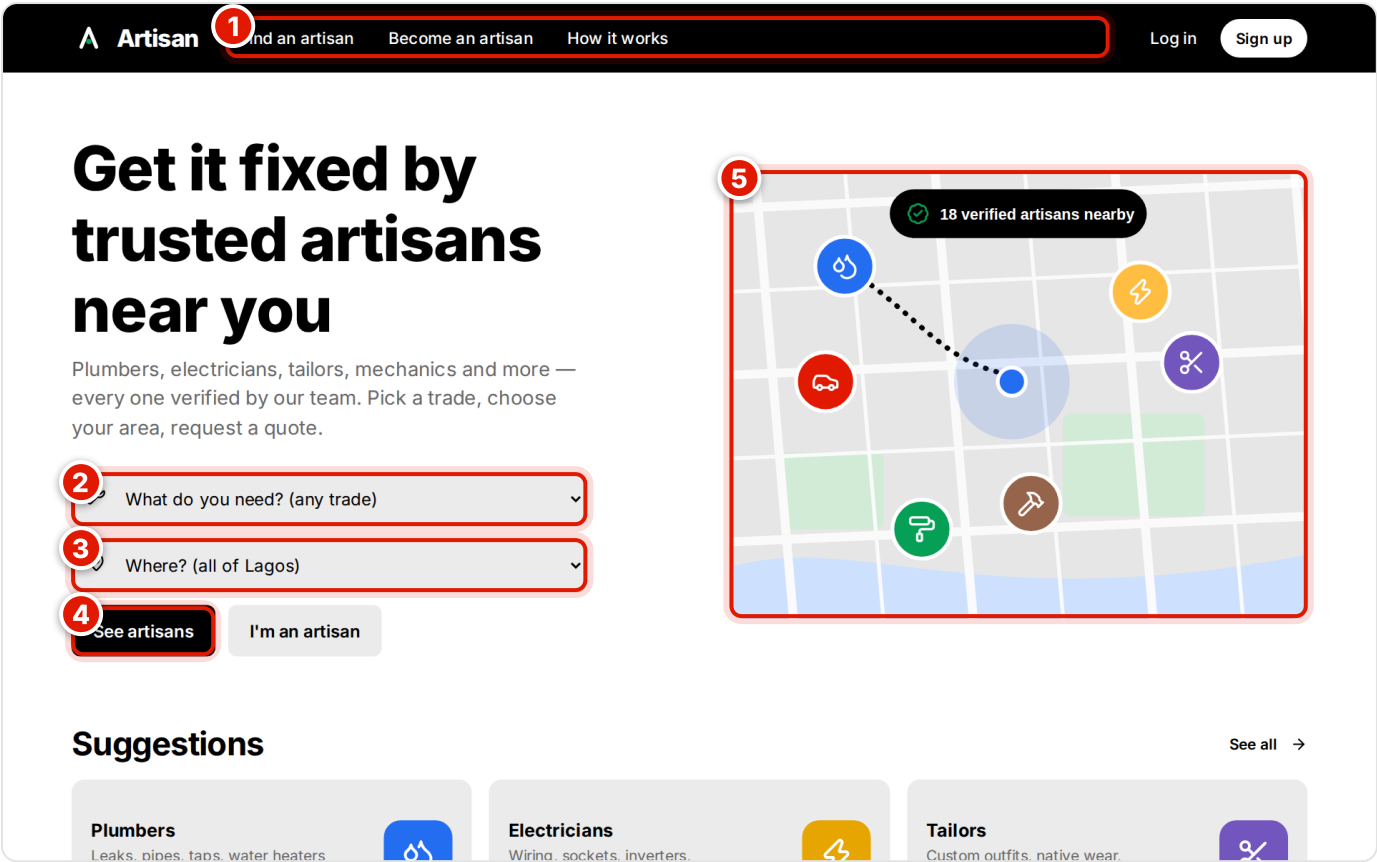

Role	What they can do	Demo login
Guest	Browse and filter verified artisans, view profiles and photos.	—
Customer	Everything a guest can, plus request quotes, accept or decline them, and track jobs.	<code>customer@artisan.ng</code>

Artisan (provider)	Create a profile (trade, area, bio, price), upload/delete work photos, receive requests, send quotes, decline, mark jobs completed.	tunde@artisan.ng
Admin	See platform stats, review pending artisans, verify or reject them with a reason.	admin@artisan.ng

All demo accounts use the password `password123` . The sample data contains 22 artisans across 6 trades and 8 Lagos areas (18 verified, 3 pending, 1 rejected), 3 customers and 7 quote requests in every state.

3. Customer guide

3.1 Home — start a search

Home page (desktop).

- 1

Top navigation: browse artisans, join as an artisan, or read how it works.
- 2

Pick a trade (plumber, electrician, tailor, mechanic, carpenter, painter).
- 3

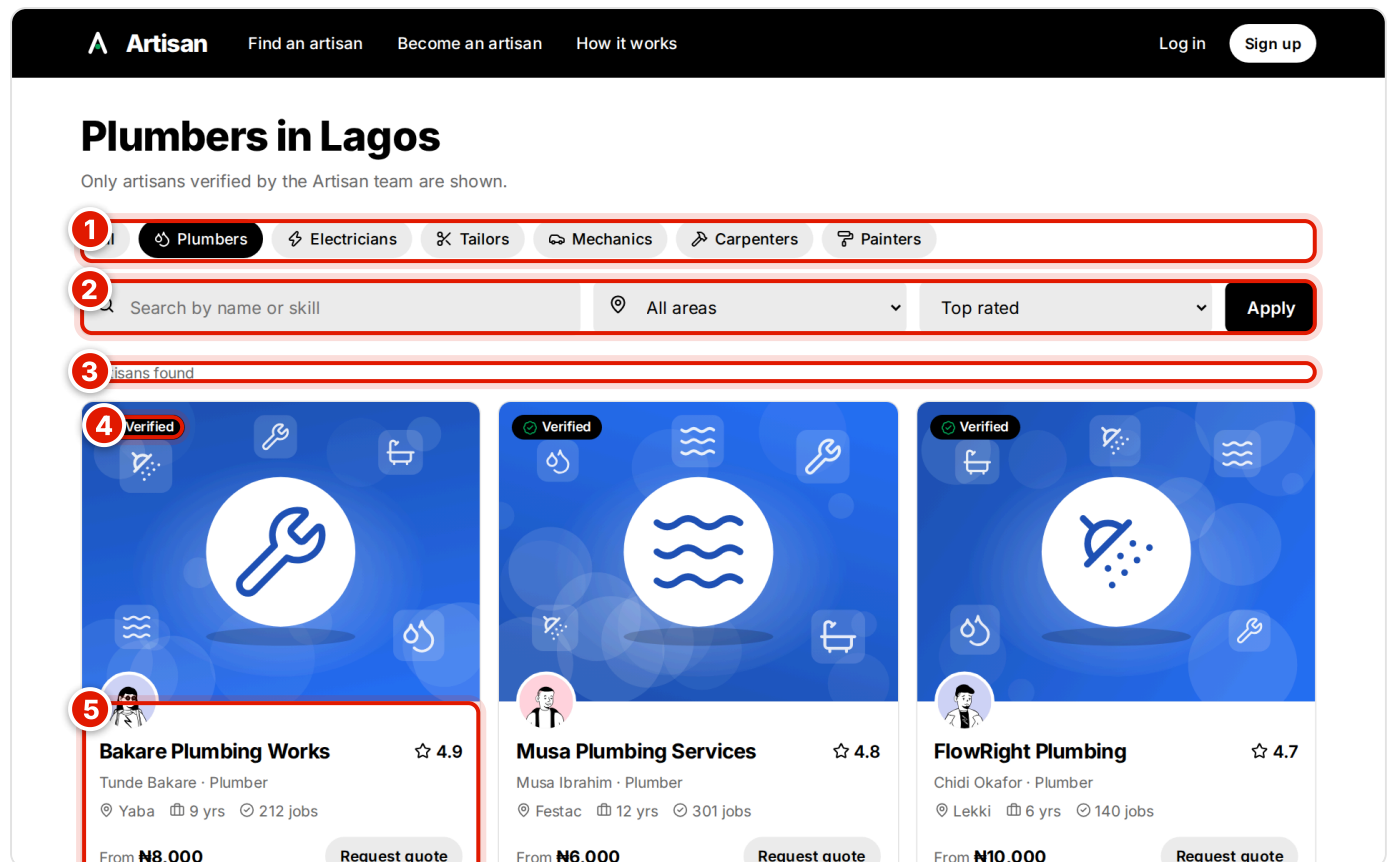

Pick an area in Lagos — only artisans who work there are shown.
- 4

Search. Takes you to the filtered results list.
- 5

Map-style illustration in the spirit of the Uber app.

3.2 Browse and filter artisans

The results page reads the filters from the URL (e.g. `/artisans?category=plumber&area=yaba`), so searches can be bookmarked and shared.

Browse page filtered to Plumbers.

- 1 Category chips switch trades instantly.
- 2 Search by name/skill, filter by area and sort by rating, price or experience.
- 3 Live count of matching artisans.
- 4 Only admin-verified artisans appear in results.
- 5 Card: rating, area, experience, jobs done and starting price.

3.3 View an artisan's profile

About

Fast, tidy plumbing for homes and offices. Leak detection, pipe replacement and bathroom installs with a 30-day workmanship guarantee.

Past work (4 photos)

Kitchen sink re-pipe

Shower mixer install

Starting from

₦8,000

Final price is agreed in the quote.

What do you need done?

1 Replace bathroom tap

Details

2 The hot water tap in the bathroom is broken and leaking. I have bought a new mixer.

Address

3 12 Herbert Macaulay Way, Yaba

Preferred date

10/08/2026

4 Request a quote

ID and past work checked by Artisan

Quote request form (logged in as a customer).

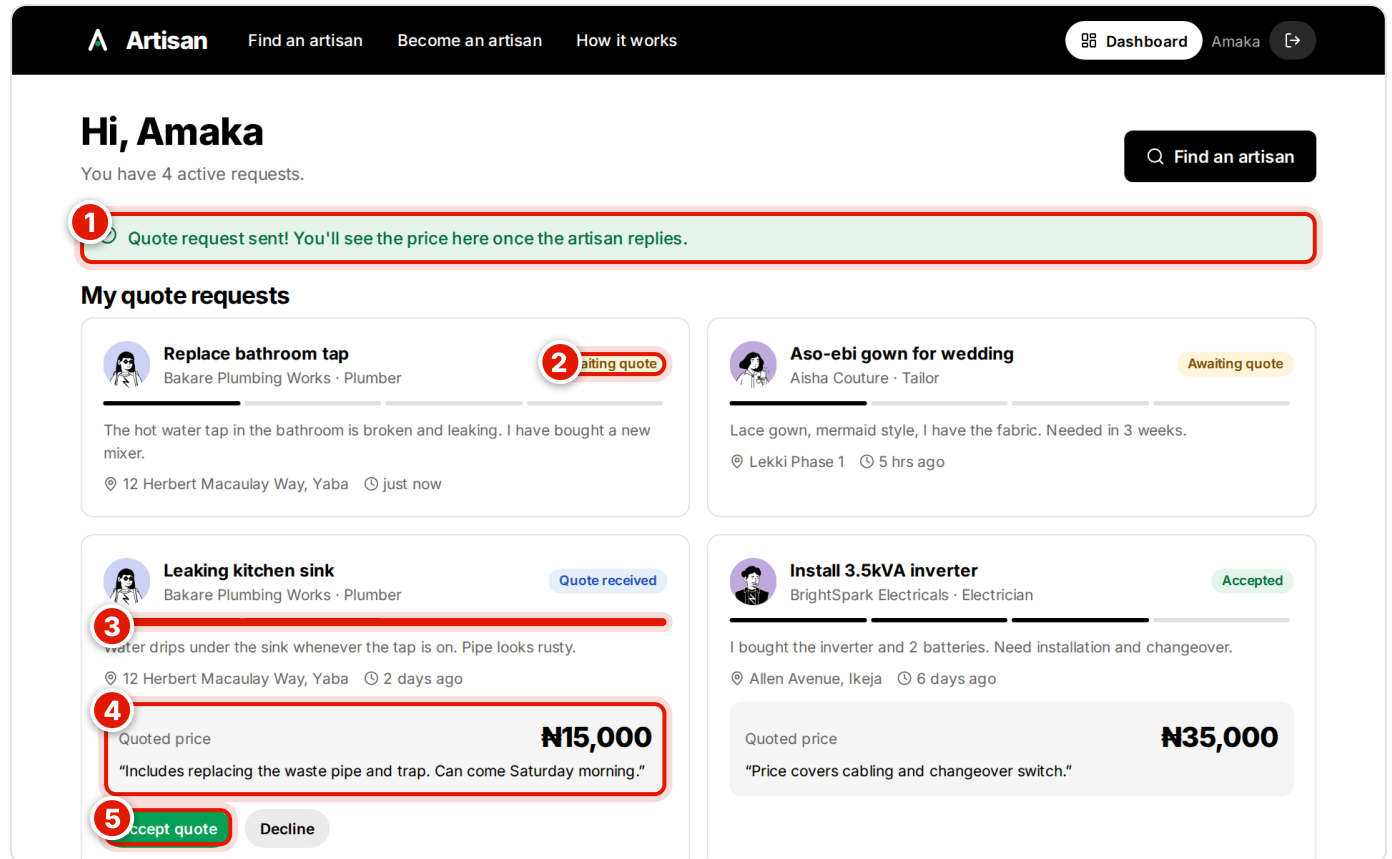

- 1 Job title.

2 Details so the artisan can price the work.

3 Where the job is.

4 Sends the request — it appears on both dashboards.

3.5 Track requests and accept a quote

Customer dashboard — every request with its status.

- 1 Confirmation that the request was sent.
- 2 New request: Awaiting quote.
- 3 Progress bar: requested → quoted → accepted → completed.
- 4 The artisan's price and note.
- 5 Accept or decline the quote.

4. Artisan guide

4.1 Sign up as an artisan

The screenshot shows the Artisan website's sign-up page. The top navigation bar includes the Artisan logo, links for 'Find an artisan', 'Become an artisan', and 'How it works', along with 'Log in' and 'Sign up' buttons. The left sidebar, highlighted with a red circle 3, features the Artisan logo and the heading 'Grow your trade with Artisan'. Below this, a list of benefits is shown with green checkmarks: 'Free listing for verified artisans', 'Show off photos of your work', and 'Get quote requests from your area'. The main content area on the right, titled 'Create your account', contains a role selection step (highlighted with a red circle 1) with two options: 'I need an artisan' (Customer) and 'I am an artisan' (Service provider). The 'I am an artisan' option is selected. Below this is a name input field (highlighted with a red circle 2), followed by fields for Email, Phone (optional), and Password. The password field has a note 'At least 8 characters'. A 'Create account' button is at the bottom, with a link to 'Log in' for existing users.

Sign-up page with the artisan role selected.

- 1 Choose your role: customer or artisan (service provider).
- 2 Basic account details — passwords are hashed with bcrypt.
- 3 Benefits panel changes with the selected role.

4.2 Create your profile and upload photos

Profile set-up form.

1

Business name shown to customers.

2

Trade (category) — used by the category filter.

3

Area — used by the location filter.

4

Short bio describing services.

5

Upload photos of past work (JPG/PNG/WEBP, max 4 MB each). Stored in Postgres.

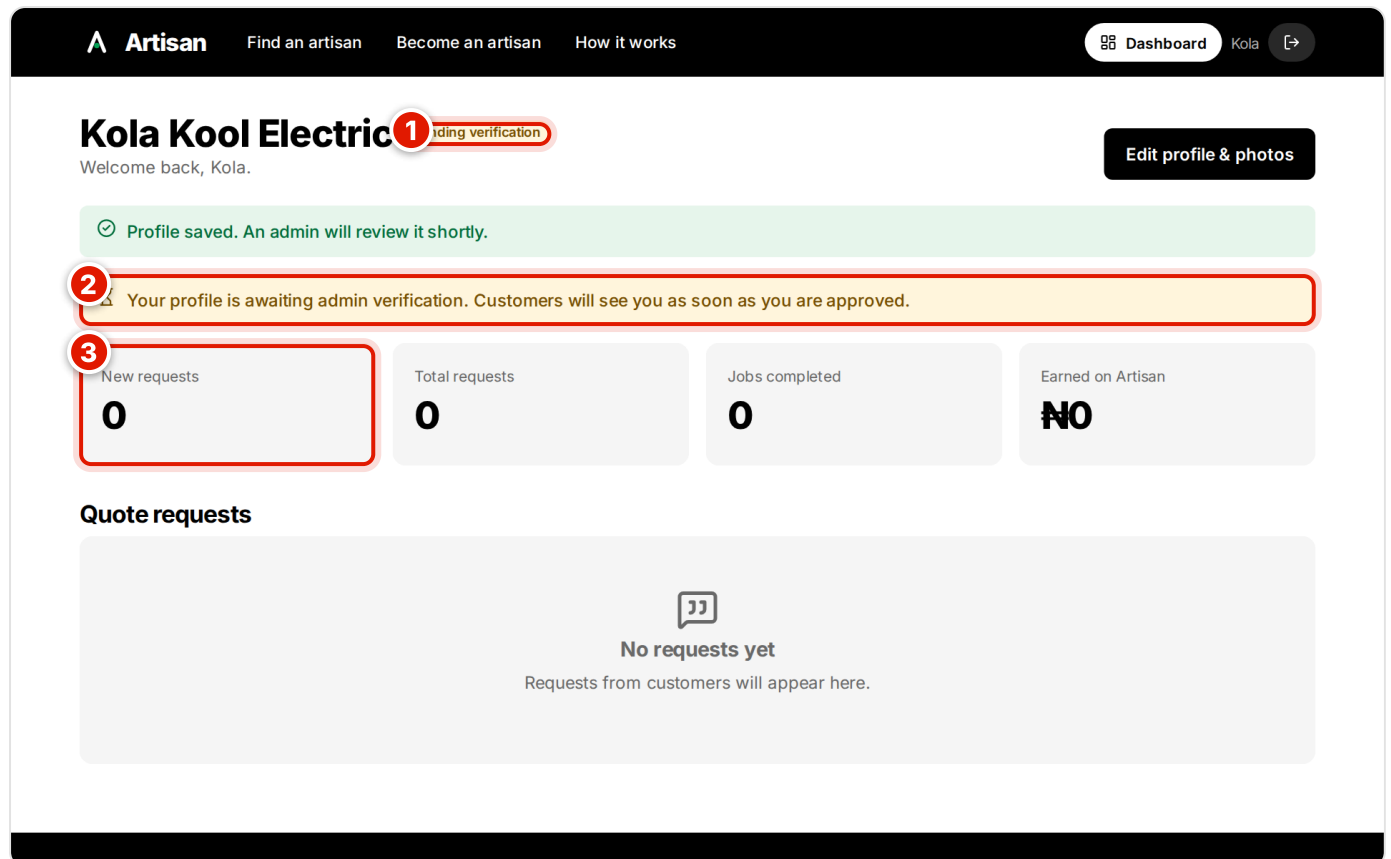

6

Submits the profile to the admin verification queue.

Artisan — Documentation

11 / 21

4.3 Wait for verification

Artisan dashboard while the profile is pending.

- 1 Status badge: Pending verification.
- 2 The artisan is hidden from search until an admin approves them.
- 3 Dashboard KPIs: new requests, totals, jobs completed and earnings.

If an admin rejects the profile, the reason appears on the dashboard. Editing and saving the profile automatically sends it back to the admin queue.

Artisans can add more photos or remove old ones at any time from **Edit profile & photos**.

4.4 Reply to quote requests

The screenshot shows the Artisan dashboard for a user named Tunde. The top navigation bar includes links for 'Find an artisan', 'Become an artisan', and 'How it works', along with a 'Dashboard' button and a user profile icon. The main header displays the user's name 'Bakare Plumbing Works' with a 'Verified' badge, a welcome message 'Welcome back, Tunde.', and buttons for 'View public profile' and 'Edit profile & photos'.

Below the header, there are four summary cards: 'New requests' (with a red box and number 1), 'Total requests' (4), 'Jobs completed' (212), and 'Earned on Artisan' (₦8,000).

The 'Quote requests' section contains two job listings. The first listing, 'Replace bathroom tap' by Amaka Obi, is highlighted with a red box and number 2. It includes a job description, address, preferred date, and a price of ₦2500 (highlighted with a red box and number 3). A note to the customer is also present. At the bottom of this listing are 'Send quote' (highlighted with a red box and number 4) and 'Decline' buttons. The second listing, 'Install new water heater' by David Mensah, is partially visible below.

Artisan dashboard with a new request.

- 1 Number of new requests waiting for a quote.
- 2 Customer's job description, address and preferred date.
- 3 Enter a price in Naira...
- 4 ...and send it. Or decline the job.

Once the customer accepts, the artisan sees the customer's phone number and a **Mark job completed** button, which also increases their "jobs done" count.

After clicking Verify.

- 1 Confirmation message after verifying.
- 2 Verified count goes up by one.

6. How it works inside

6.1 Architecture

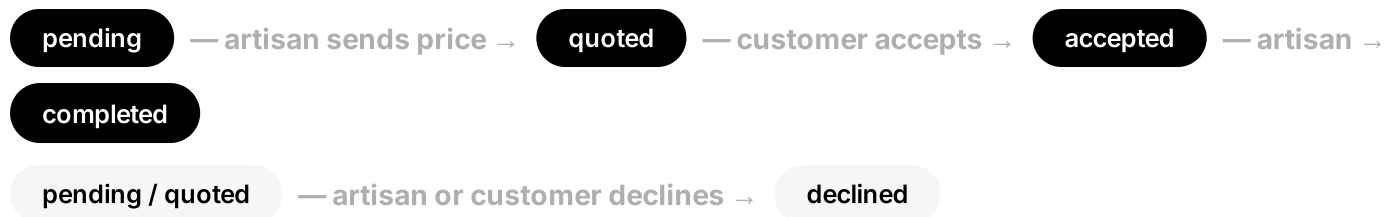

Pages are React Server Components that query the database directly through the service layer. Every form posts to a **Server Action** which checks the user's session and role, validates input with **Zod**, calls a service function and redirects back with a success or error message. No client-side JavaScript is needed for any feature.

Concern	How it's done
Authentication	Passwords hashed with bcrypt . Sessions are signed JWTs (jose , HS256) in an HTTP-only cookie, valid 7 days.
Authorization	<code>requireRole()</code> on every protected page and action; services also check ownership (e.g. only the artisan who received a request can quote it).
Photo uploads	Validated (type + 4 MB limit) and stored as <code>bytea</code> in Postgres, served by <code>/api/uploads/[id]</code> . This survives deploys on Railway's ephemeral disk.
Search	One SQL query with joins; filters on category slug, area slug and a case-insensitive text match, always restricted to <code>status = 'verified'</code> .

6.2 Data model

Table	Key columns
users	id, name, email (unique), password_hash, role (customer provider admin), phone
categories	id, slug, name, icon, description — the 6 trades
areas	id, slug, name, city — the 8 Lagos areas
providers	user_id → users, category_id, area_id, business_name, bio, years_experience, starting_price, status (pending verified rejected), rating, jobs_completed, rejection_reason
work_photos	provider_id → providers, url, caption
uploads	id, mime, data (bytea) — raw uploaded images
quote_requests	customer_id, provider_id, title, details, address, preferred_date, status, quoted_price, provider_note

6.3 Quote lifecycle

The allowed moves live in one table in `src/lib/quote-status.ts` ; any other move (or the wrong person trying it) is refused.

6.4 Artisan verification

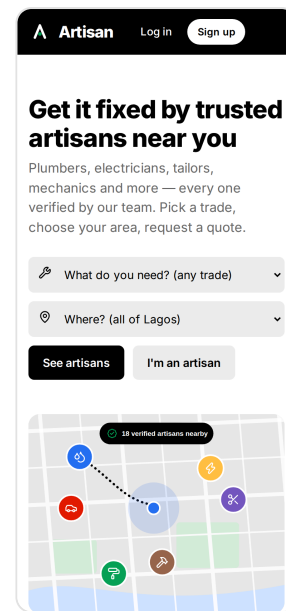

7. Branding and UI

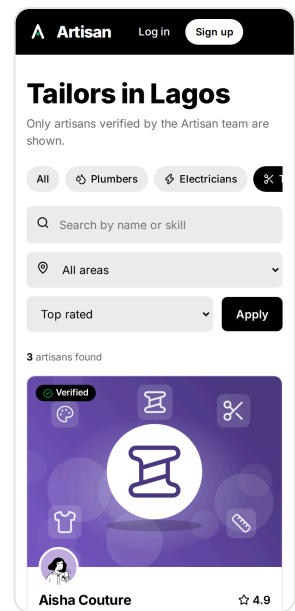

Name: Artisan. **Logo:** a bold geometric “A” (like a roof or a compass) on a black tile, with a green dot standing for a verified pin on the map.

Inspired by Uber: black navigation bar, black-and-white palette, big bold headings, grey input fields with icons, “Suggestions” tiles for categories, pill buttons and a map-style hero.

Token	Value
Primary	#000000 / #FFFFFF
Surfaces	#F6F6F6, #EEEEEE
Verified / success	#05A357
Info / link	#276EF1
Font	Inter (self-hosted)
Icons	Lucide
Avatars	DiceBear “Notionists”

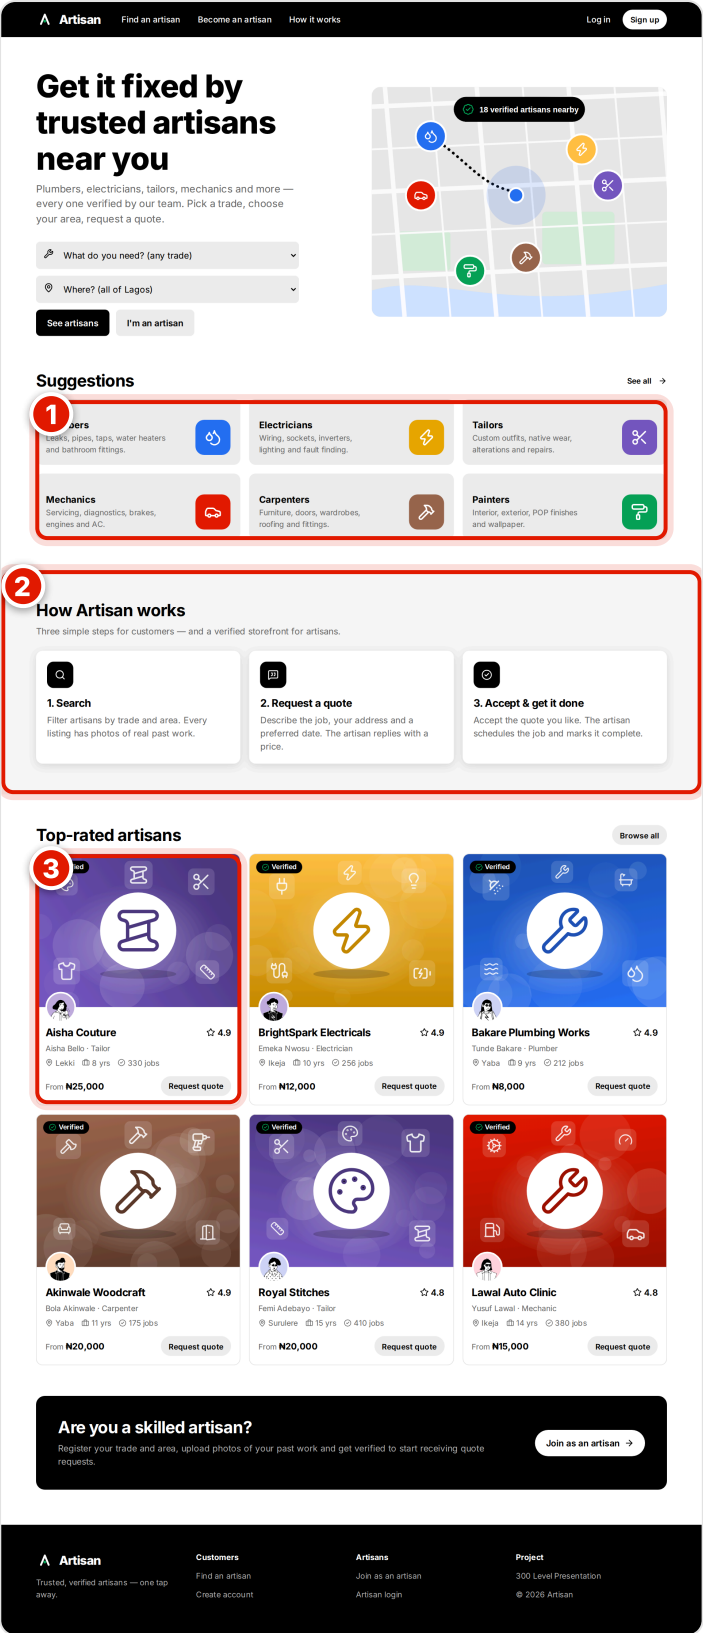

Mobile — home

Mobile — browse

Full home page

Full home page.

- 1

'Suggestions' tiles — one tap jumps to a trade.
- 2

How it works, in three steps.
- 3

Top-rated verified artisans.

8. Testing

Two test suites run against a real PostgreSQL test database that is migrated and seeded fresh before each run.

Suite	Tool	What it covers
Unit & integration (26 tests)	Vitest	Quote state machine, formatting, Zod validation, session signing and tamper detection; user registration and login; search filters (category, area, text, sort, verified-only); onboarding, photo upload/delete, verify/reject and resubmission; full quote lifecycle, ownership and role checks.
End-to-end (9 tests)	Playwright (Chromium)	Home and search, chips and empty state, profile gallery, hidden unverified profiles (404), the complete journey : artisan registers with a photo → admin verifies → customer requests → artisan quotes → customer accepts → artisan completes; admin rejection with reason; bad login; access control; duplicate e-mail.

```
npm test          # unit + integration (Vitest)
npm run build && npm run test:e2e  # end-to-end in a real browser (Playwright)
```

Result at the time of writing: **26/26** unit/integration tests and **9/9** end-to-end tests passing.

9. Running locally and deploying

Run locally

```
cp .env.example .env      # set DATABASE_URL and SESSION_SECRET
npm install
npm run db:deploy          # create tables + load sample data
npm run dev                # http://localhost:3000
```

Deploy to Railway (project "school-projects")

1. In the project: **New** → **GitHub Repo** → choose this repository (pick the branch under *Settings* → *Source* if needed).
2. **New** → **Database** → **PostgreSQL**.
3. On the app service add the variables `DATABASE_URL = ${Postgres.DATABASE_URL}` and `SESSION_SECRET` (any long random string).
4. **Settings** → **Networking** → **Generate Domain**.

`railway.json` runs `npm run build`; on every start it applies migrations and, on a brand-new database, loads the sample data automatically.

10. 5-minute presentation script

Time	What to show and say
0:00 – 0:30	Problem. “Finding a trustworthy artisan relies on word of mouth — you can't see their work or compare prices.”
0:30 – 1:30	Customer search. Home page → pick <i>Plumbers</i> + <i>Yaba</i> → See artisans. Show chips, area filter, sort and the Verified badges. Open <i>Bakare Plumbing Works</i> — photos, rating, starting price.
1:30 – 2:30	Artisan onboarding. Sign up as an artisan → choose trade and area → upload a photo → submit. Point out the <i>Pending verification</i> banner and that they're hidden from search.
2:30 – 3:15	Admin. Log in as <code>admin@artisan.ng</code> → Pending tab → Verify. The artisan is now searchable.
3:15 – 4:15	Quote flow. As <code>customer@artisan.ng</code> request a quote → as the artisan send ₦ price → as the customer accept. Show the progress bar.
4:15 – 5:00	Tech. Next.js + TypeScript, Drizzle + PostgreSQL, Server Actions, role-based access, 35 automated tests, deployed on Railway. Questions.

Tip: open four browser windows in advance (guest, customer, artisan, admin — use private windows) so you can switch roles without logging in and out.
